eCommerce Add-On for Maximo

For nearly 20 years, Prozone has been developing and implementing software tailored to our customers' needs. Our primary clients come from large economic systems, such as government institutions, banks, insurance companies, and oil companies.

Our software products aim to simplify and facilitate business activities by allowing professionals the opportunity to save time, increase efficiency and streamline their company assets and information.

The expertise we have gained through many years of collaboration with clients from different industries, and our partnership with IBM as their Gold Business Partner inspired us to develop a custom eCommerce add-on for IBM Maximo.

Why eCommerce Add-On for Maximo?

Prozone's eCommerce add-on for Maximo creates a simplified and functional online collaboration between the purchaser and the external supplier. The condition for implementing the eCommerce add-on is that the company that has Maximo should have a contract with the supplier. During the implementation of the add-on, Prozone makes all the necessary adjustments in the software, provides documentation, and trains the procurement specialists who will work with the add-on.

The add-on allows for an automated, fast, and traced purchasing experience, thanks to its features such as:

- centralized supplier database
- enhanced catalog management
- direct punch-out functionality

Users can now punch out directly from Maximo to the online marketplace to search for and select items from integrated suppliers. The selected goods then auto-populate the Maximo purchase request, ensuring correct and current data. When the purchase request has been approved by the relevant parties, it becomes a purchase order and is transmitted through Maximo.

The eCommerce add-on can be used only by the companies that own the Maximo software, meaning only Maximo owners can purchase via our eCommerce add-on. A new button is added where the user, i.e., the company that is making the purchase, clicks and is transferred to the website of suppliers, i.e., companies that have signed contracts with a company that has Maximo.

Maximo also boasts an inventory module for storing data on all products, services, and materials that the company has ever ordered via Maximo.

Benefits of eCommerce Add-On For Maximo

Common procurement issues, such as differences in price, unavailability of products in stock, and absence of electronic trace of purchases, require phone or email communication which is time-consuming and inefficient.

The eCommerce add-on accelerates and simplifies the procurement process in large companies with a vast number of suppliers and purchase large quantities of products and services on a daily basis.

By using our eCommerce add-on, a company's procurement representative can discover the prices of products or services and the state of a supplier's stock, reducing the scope of work and minimizing the possibility of making a mistake. The procurement sector no longer needs to send out a number of emails, make numerous phone calls, and compare prices manually, as all the necessary data are present in the purchasing portal within Maximo.

eCommerce Add-On Implementation

eCommerce add-on has been implemented into companies across industries, such as
